

E1 math-161 / step 3

gold: Lean P(Lean) = 25.2% margin = -1.09

... - a\] Therefore, $(7 - a)$ must be a multiple of 11. Since (a) is a digit (i.e., $(0 \leq a \leq 9)$), the only possible value for $(7 - a)$ is 0 (because $(-11 < 7 - a < 8)$). Thus, ...

E2 gsm8k-133 / step 1

gold: Python P(Lean) = 3.5% margin = -3.31

Second, after purchasing a package of Post-it notes, she placed a single Post-it note on each of 220 different cups of coffee at work. This means she used 220 Post-it notes for the cups.

Attribution to the routing margin (logits): orange → Python · blue → Lean
